	<p><i>The European Trust Regulation has been in place 12 months and promises great ROI's for those who dare to use services like qualified web services certificates, qualified signatures, and others, defined by the Regulation. However, does everyone fully understand what the qualified services providers should put in place and therefore which guarantees they should give? Does everyone understand what these services actually provide (or not) to relying parties and what relying parties can (not) expect? This session will be presented in two parts, (corresponding to these areas) ENISA guidelines that have been drafted recently and engage with the participants on any outstanding questions in this area.</i></p>	<p><i>Every organisation should sign up to the ten principles on identification as published by the World Bank Group & Centre for Global Development – is this the way forward for every individual and organisation to both feel and be safe online?</i></p> <p>Panellists: Ian Fish, BCS-ISSG Membership Secretary John Bullard, TrustChains</p>	<p>Nick Pope, Principal Consultant/Jonathan Allin, Product Manager, Thales e-Security: Establishing identity and maintaining privacy in the cloud: the need for Hardware Security Modules</p> <p>Dr Edgar Whitley, Associate Professor LSE: Privacy versus Identity?
